

Experiment resources

Zero-shot prompting:

Generate a short continuous story (with no sections, headings, or bullet points) that simplifies understanding how to comply with the concept of {CONCEPT NAME}, as found in article {ARTICLE NUMBER} of the EU AI Act. The story should feel like a real-life narrative rather than a legal explanation, while still accurately reflecting the compliance logic behind the concept.

Contextual prompting:

For my thesis, I am researching to what extent LLMs are able to simplify difficult concepts found in the EU AI Act that specifically AI startups are most likely to encounter based on scientific literature. In my experiment, I am giving participants either the legal text itself, or a generated story that should simplify that specific legal concept as it is stated in the EU AI Act, after which I am going to evaluate whether these concepts are better understood by the participants with the narrative or not. My target participant group will most likely consist of students who are doing the master's course Information Systems or Data Science at the UvA, as they form a feasible participant group for my experiment, and they are more likely to start their own AI startup, or work at an AI SME. Now for my experiment, generate a short continuous story (with no sections, headings, or bullet points) that simplifies understanding how to comply with the concept of {CONCEPT NAME}, as found in article {ARTICLE NUMBER} of the EU AI Act. The story should feel like a real-life narrative rather than a legal explanation, while still accurately reflecting the compliance logic behind the concept.

Rephrase and Respond prompting:

{Generate a short continuous story (with no sections, headings, or bullet points) that simplifies understanding how to comply with the concept of {CONCEPT NAME}, as found in article {ARTICLE NUMBER} of the EU AI Act. The story should feel like a real-life narrative rather than a legal explanation, while still accurately reflecting the compliance logic behind the concept.}

Rephrase and expand the question, and respond.

Prompt used for multiple-choice questions:

Read the legal text summary for the EU AI Act concept and the accompanying example narratives below. Please generate a good multiple choice question that is answerable with both the legal text summary and every one of the narratives apart from each other with four candidates (only one correct answer) to really test if a reader understands the concept: Start your response with "Question:". Candidates

are ordered by (A), (B), (C), (D). In the end, give the right answer with its short explanation starting with "The right answer is ..., because ...". Resources: Concept: "{LEGAL TEXT SUMMARY}", from article {ARTICLE NUMBER}". Generated narrative 1: "{ZERO-SHOT}" Generated narrative 2: "{CONTEXTUAL}" Generated narrative 3: "{RAR}"
